Note: Couldn't get both the website UI and the certificate to show up on one screenshot since the certificate window covers up the website UI and I can't move that window in any way.

04.2g. Docker Guestbook

2. Version 1 Ubuntu

```
# Use Ubuntu 20.04 as the base image
FROM ubuntu:20.04

# Specify your e-mail address as the maintainer of the container image
LABEL maintainer="brachang@pdx.edu"

# Execute apt-get update and install to get Python's package manager
# installed (pip)
RUN apt-get update -y
RUN apt-get install -y python3-pip

# Copy the contents of the current directory into the container directory /app
COPY . /app

# Set the working directory of the container to /app
WORKDIR /app

# Install the Python packages specified by requirements.txt into the container
RUN pip install -r requirements.txt

# Set the program that is invoked upon container instantiation
ENTRYPOINT ["python3"]

# Set the parameters to the program
CMD ["app.py"]
```

3. Build and run the Ubuntu-based container

Take a screenshot of the results for your lab notebook

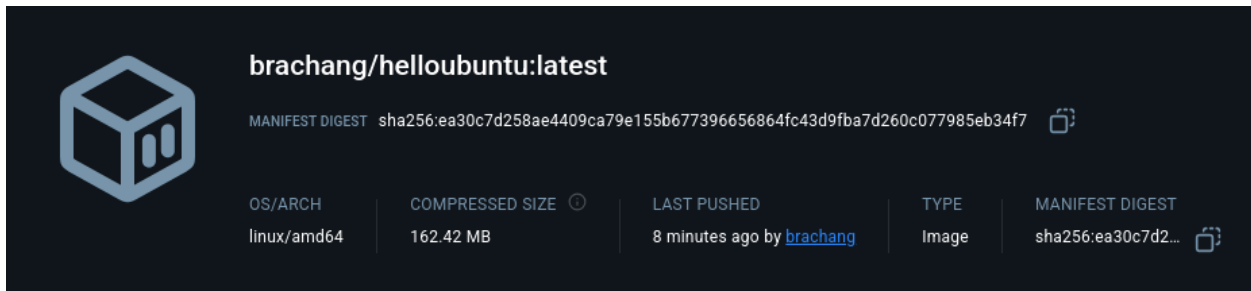

```
brachang@course-vm:~/cs430/cs430-src/04_container_dockerhub$ docker images
REPOSITORY      TAG         IMAGE ID      CREATED        SIZE
helloubuntu     latest     acdb1e293ad2  23 seconds ago  455MB
ubuntu          20.04      6013ae1a63c2  3 months ago   72.8MB
brachang@course-vm:~/cs430/cs430-src/04_container_dockerhub$
```

6. Running from Docker Hub

Run the image directly from Docker Hub and show a screenshot of the output of the command in your lab notebook.

```
brachang@course-vm:~/cs430/cs430-src/04_container_dockerhub$ docker run -di -p 8000:5000 --name hellou brachang/helloubuntu
Unable to find image 'brachang/helloubuntu:latest' locally

brachang@course-vm:~/cs430/cs430-src/04_container_dockerhub$
```

Take a screenshot of the container image and its size for your lab notebook.

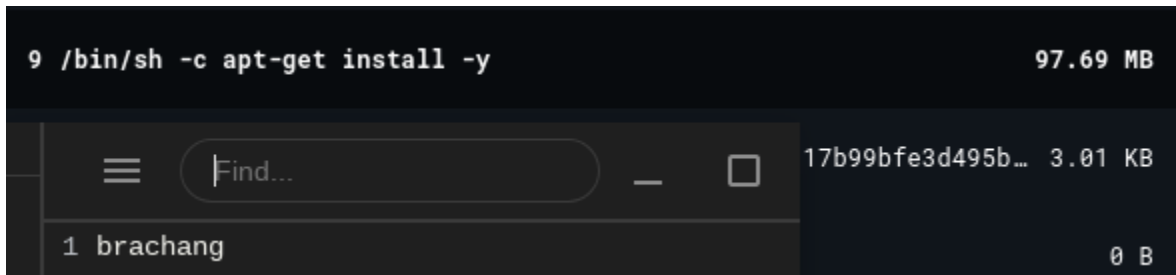

The screenshot shows the Docker Hub page for the image `brachang/helloubuntu:latest`. It includes the Docker logo, the image name, the manifest digest, and a table with details about the image.

OS/ARCH	COMPRESSED SIZE	LAST PUSHED	TYPE	MANIFEST DIGEST
linux/amd64	162.42 MB	8 minutes ago by brachang	Image	sha256:ea30c7d258ae4409ca79e155b677396656864fc43d9fba7d260c077985eb34f7

What layer adds the most to the container image? How much does it add?

The `/bin/sh -c apt-get install -y` takes up the most space.

The screenshot shows the Docker image layers for the `brachang/helloubuntu:latest` image. The layers are listed in a table, with the top layer being the most recent.

Layer	Image ID	Size
9 /bin/sh -c apt-get install -y	17b99bfe3d495b...	97.69 MB
1 brachang		0 B

7. Version 2: Alpine

```
# Use the Python version of alpine as the base image
FROM python:alpine

# Specify your e-mail address as the maintainer of the container image
LABEL maintainer="brachan@pdx.edu"

# Copy the contents of the current directory into the container directory /app
COPY . /app

# Set the working directory of the container to /app
WORKDIR /app

# Install the Python packages specified by requirements.txt into the container
RUN pip install --no-cache -r requirements.txt

# Set the program that is invoked upon container instantiation
ENTRYPOINT ["python3"]

# Set the parameters to the program
CMD ["app.py"]
```

8. Build and run the Alpine-based container

Take a screenshot of the image generated and its size for your lab notebook. How much smaller is the image than the Ubuntu one?

It's about 400 MB smaller than the Ubuntu one

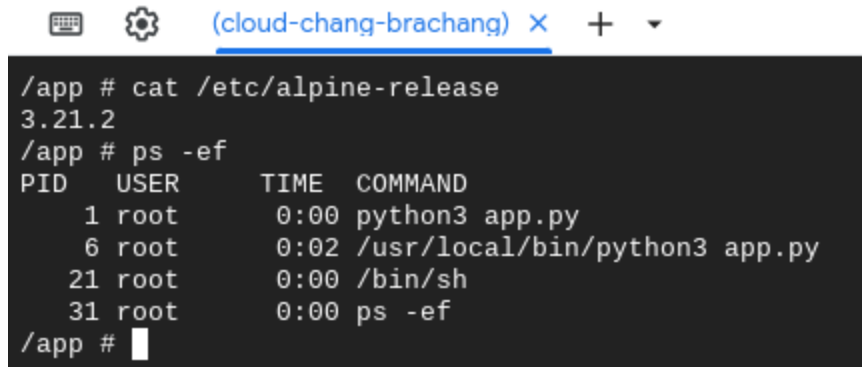

```
brachan@course-vm:~/cs430/cs430-src/04_container_dockerhub$ docker images
REPOSITORY      TAG          IMAGE ID       CREATED        SIZE
helloalpine     latest      a22825f0eca4   16 seconds ago 57.7MB
python          alpine      d5cb4e1bd67f   2 weeks ago   44.9MB
ubuntu          20.04       6013ae1a63c2   3 months ago  72.8MB
brachan@course-vm:~/cs430/cs430-src/04_container_dockerhub$
```

Show the output of this command in a screenshot for your lab notebook. What might have happened?

It appears there is no bash

```
brachan@course-vm:~/cs430/cs430-src/04_container_dockerhub$ docker exec -it helloa /bin/bash
OCI runtime exec failed: exec failed: unable to start container process: exec: "/bin/bash": stat /bin/bash: no such file or directory: unknown
brachan@course-vm:~/cs430/cs430-src/04_container_dockerhub$
```

Take a screenshot of the output of each

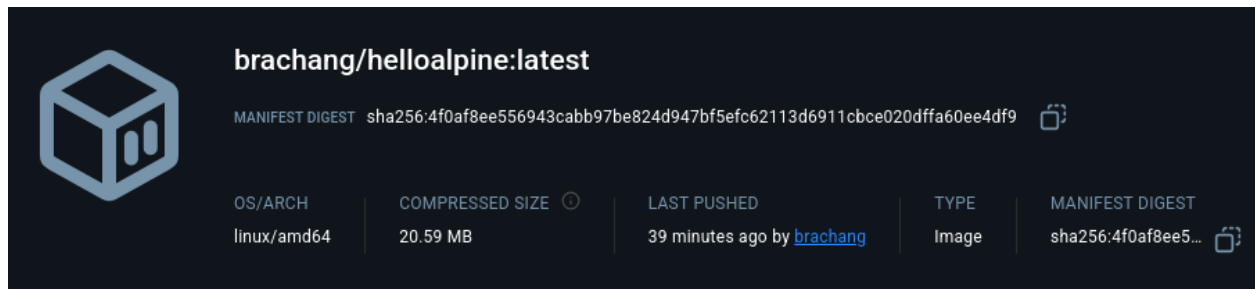

A terminal window with a dark background and light blue text. The window title is "(cloud-chang-brachang) X". The terminal output shows the Alpine Linux release version and a list of running processes.

```
/app # cat /etc/alpine-release
3.21.2
/app # ps -ef
PID   USER     TIME   COMMAND
  1  root      0:00   python3 app.py
  6  root      0:02   /usr/local/bin/python3 app.py
 21  root      0:00   /bin/sh
 31  root      0:00   ps -ef
/app #
```

9. Docker Hub Alpine

Take a screenshot of the container image and its size.

10. Compute Engine Ubuntu VM deployment

Take a screenshot of the entry that includes the VM's external IP address for your lab notebook
